Mobile/Web QA Engineer

Description

Are you excited by the challenge of continuously delivering a high-quality software product across multiple platforms and release vehicles? Do you believe that well-designed automated tests are a critical part of a successful software QA team? Do you want to be a key contributor to the development of an industry-leading product that is "helping to transform the way businesses access, consume, and communicate complex information"?

Roambi's QA team is growing, and we are looking for an experience, highly motivated software engineer to help us build the automated testing tools and processes that are critical to our success in this industry. As the provider of a complex client-server mobile application that is rapidly expanding to multiple platforms, we are committed to using best practices in our software development process so that we can continue to meet our own high quality standards and the expectations of our clients.

What are we looking for?

This position requires close collaboration with other QA team members, our software engineers, and our product managers. Some of your responsibilities would include:

- Selecting appropriate technology for automated testing of mobile applications (iOS, Android, and other platforms) in a continuous delivery environment
- Continuing to build out coverage in existing automated testing of multiple web applications
- Working directly with software engineers to ensure that application code is testable
- Working directly with the build / operations team to integrate automated testing into existing build pipelines
- Designing and implementing reporting / performance analytics for test plans
- Be an advocate for automated testing within our engineering organization

Desired Professional Skills

- Strong software design and development experience--you will be a member of the QA team, but the responsibilities are very focused on software engineering tasks
- Experience with major automated testing systems and services--tell us what you have used, why you used it, and whether you would use it again
- Experience mentoring and / or leading junior team members
- Strong experience with some of the following: Javascript, Ruby, Objective C, Java, C
- Familiarity with some of the following:
  - Selendroid, MonkeyTalk, Robolectric, Appium
  - Jenkins CI, Bamboo, XCode build server
  - RSpec, Cucumber, Mockito,
- Ability to collaborate well with others and communicate best testing practices to the rest of the engineering team
